SyAM Software

The Power Management Challenge

"Using SyAM Software's solutions, we've been able to provide easy to implement solutions that quickly achieve substantial and tangible results for our customers. In this era of shrinking IT budgets and increasing management expectations, a clear and substantial return on investment helps all involved parties benefit."

Michael Mazzariello
Director of Business
Development-Alliances for
Integrated Financial Services

SyAM Software™

SyAM Software puts you back in control of your power consumption

Energy costs continue to rise and to be a significant drain on the profitability of any business or organization. That is why companies everywhere are looking for ways to cut back on energy usage. Many utilities firms are now offering significant rebates for reduced energy usage. However, to take advantage of these rebates, firms typically have to cut energy consumption by a defined percentage over the previous year, often as much as 20% or more. Herein lies the challenge. How do you cut energy costs while still maintaining service levels necessary to be competitive?

The solution is as simple as the "off" button on the front of the computers your employees use every day. Desktop and notebook systems are often left running 24x7x365, which consumes far more energy than you may realize. Even power-save modes draw energy – wasted energy equals wasted profits.

Let SyAM Software help you tap into the hidden savings potential in your IT assets.

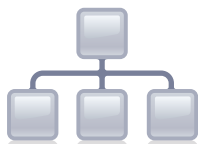

Power Auditor From SyAM Software

Power Auditor is a no cost, no obligation software tool that gives you a full understanding of the cost savings potential for your organization from implementing a power management solution. By running the Power Auditor, you can expect:

- Proof of Savings in as few as 7-10 days
- Quick & Easy Installation
- Ongoing reporting and tracking
- No cost, no obligation

Quantify Your Savings

Our typical client has achieved significant cost savings through energy savings from managing just their PCs alone. The license cost of the application per workstation is returned in under 6 months with substantial ongoing cost savings from continued use. Power Auditor not only helps you identify the savings but provides ongoing automated reporting on achieved savings.

Software Capabilities

Power Auditor consists of a Management Console that provides access for the Power Auditor software to remotely discover and monitor systems for power consumption and the Power Auditor software. Power Auditor should be installed on a system that is powered on all the time and is connected to the network so it can communicate with all systems you wish to monitor. The System Area Management Console should be installed on a system with which the Power Auditor can communicate.

Power Auditor enables you to:

- Quickly and easily monitor the power consumption of systems across your network
- Create groups of systems that reflect your operating environment
- Compare this data to power schedules you create for each group of systems
- Provide "Proof of Savings" detailed information, down to system level and hours to be saved
- Provide daily, weekly and monthly reports on Power Savings Achieved
- Track ongoing power consumption across your network

Pre-Installation Requirements

- The system you are installing the Power Auditor onto must have Microsoft SQL Express 2005* or 2008* installed
- You must have System Area Manager installed with an extended Trial License key for the number of systems you wish to monitor.
- Power Auditor can monitor up to 5,000 systems, 100 groups with up to 500 systems.

Our Products

Our Power Auditor, System Client and Management Utilities products can be downloaded and used for free. Our System Area Manager product can be downloaded and tested for free for 15 days for 15 System Clients. See our website for a list of resellers.
